Project Name: Energy Storage Systems Project – Los Alisos Water Recycling Plant

Project Location: The project is located at 23600 Muirlands Boulevard in the city of Lake Forest, California. (See Figure 1)

County: Orange

Description of Nature, Purpose and Beneficiaries of Project:

Irvine Ranch Water District (IRWD) is proposing to install Demand Response Energy Storage (DRES) or Demand Charge Management (DCM) systems at various existing District facilities. IRWD's Los Alisos Water Recycling Plant (LAWRP), located at 23600 Muirlands Boulevard in the city of Lake Forest, is a proposed site.

The proposed project consists of the installation of a DRES 1,000 kilowatt, six-hour battery storage system and ancillary equipment, which will provide primary power to the LAWRP facility during peak energy use and will also provide critical support to the electric grid in the local area. The DRES will involve charging batteries from the grid during off-peak hours and then discharging them during on-peak times, reducing stress on the grid and reducing the overall cost of power. During peak demand periods, the LAWRP facility would draw power from the DRES system to offset its demand from the regional electrical grid. The DRES system can provide up to six hours of continuous

regional electrical grid. The DRES system can provide up to six hours of continuous discharge power. IRWD will contract with a third party to install and operate the proposed DRES system.

The proposed 1,000 kilowatt DRES system will include a cluster of lithium ion battery units mounted on a concrete pad. Each battery block would have a height of approximately 86 inches and its footprint is approximately 76 feet by 38 feet. The DRES system will be located outside, within the existing LAWRP facility, and would be compatible with the existing land use. The system would resemble typical utility scale infrastructure, such as electrical and cable boxes. Construction of the DRES system is expected to take no more than three weeks. Following installation, the DRES system will be maintained by IRWD and its partners.

In addition to complying with all laws and regulations and securing any required permits, the Energy Storage Systems Project incorporates the environmental commitments from previous CEQA documentation applicable to MWRP to ensure that there would be no potentially significant impacts to the environment. In the event that tree removal becomes necessary, IRWD will conduct this work during non-nesting season (September 15 to February 15).

Name of Public Agency Approving and Carrying out this Project:

Irvine Ranch Water District (IRWD)

Reasons why project is exempt:

IRWD has made the determination that this Energy Storage Systems Project at LAWRP is exempt from the California Environmental Quality Act (CEQA) by statute (California Code of Regulations, Title 14, Chapter 3, Article 19). Categorical exemptions include minor alteration of existing facilities (CEQA Guidelines, Section 15301) and new construction or conversion of small structures under CEQA Guideline Section 15303. Under Class 1, activities are exempt for the operation, or minor alteration of existing public or private structures, facilities, mechanical equipment, or topographical features,

involving negligible or no expansion of use beyond that existing at the time of the lead agency's determination (CEQA Guidelines, Section 15301). Class 3 consists of construction and location of limited numbers of new, small facilities or structures; installation of small new equipment and facilities in small structures, and the conversion of existing small structures from one use to another where only minor modifications are made in the exterior of the structure (CEQA Guidelines, Section 15303). Additionally, under Class 3, installation of small new equipment and facilities for water, sewage, electrical, gas and other utility extensions are exempt.

The proposed Energy Storage Systems Project at LAWRP is new construction of a small structure at an existing facility. The proposed Energy Storage Systems Project at LAWRP will serve to provide the existing LAWRP with an additional electrical power source during peak demand periods by installing a DRES system on the property. IRWD will comply with all laws and regulations, will secure any required permits, and the Project incorporates the environmental commitments from previous applicable CEQA documentation to ensure that there would be no potentially significant impacts and therefore, would meet the requirements of the Class 1 and Class 3 categorical exemption over CEQA.

Submission of this form is optional. Local agencies may file this form with the county clerk pursuant to Public Resources Code Section 21152(b). The filing of the notice starts a 35-day statute of limitations on court challenges to the approval of the project under Public Resources Code Section 21167(d). Failure to file the notice results in the statute of limitations being extended to 180 days.
